

Analysis of protocol support, certificate configuration, and cipher strength
for the target endpoint.

TARGET:
google.com

PORT:
443

SCAN DATE:
2026-01-02 19:10:37

Overview

TOTAL VULNERABILITIES
3

HIGH SEVERITY ISSUES
None Detected

PROTOCOLS ENABLED
6

Use this overview to quickly understand whether the server exposes legacy protocols or high-severity weaknesses that should be remediated with priority.

Detected Vulnerabilities

Severity	Vulnerability	Description
MEDIUM	Weak Cipher Suite	Cipher DES-CBC3-SHA uses a weak key size (112-bit).
MEDIUM	Weak Cipher Suite	Cipher DES-CBC3-SHA uses a weak key size (112-bit).
MEDIUM	Weak Cipher Suite	Cipher DES-CBC3-SHA uses a weak key size (112-bit).

Supported Protocols

The table below shows which SSL/TLS protocol versions are accepted by the server. Legacy protocols (SSLv2, SSLv3, TLS 1.0/1.1) should generally be disabled.

Protocol	Status	Risk Note
2	Disabled	Modern / Recommended
3	Disabled	Modern / Recommended
1.0	Enabled	Modern / Recommended
1.1	Enabled	Modern / Recommended
1.2	Enabled	Modern / Recommended
1.3	Enabled	Modern / Recommended

Server Configuration Checks

Key SSL/TLS Behaviors

- Heartbleed Vulnerability: **Safe**
- TLS Compression (CRIME): **Disabled**
- Secure Renegotiation: **Supported** — Client/server renegotiation uses the secure extension.
- Fallback SCSV: **Supported** — Protects against protocol downgrade attacks.

Certificate Chain

Details of the server certificate and any intermediate or root certificates presented during the TLS handshake.

Leaf Certificate

EC 128-bit

Common Name (CN): *.google.com

Issuer: WR2

Signature Algorithm: sha256WithRSAEncryption

Key: EC (128 bits)

Validity: Dec 3 15:49:27 2025 GMT to Feb 25 15:49:26 2026 GMT

Supported Ciphers

This section lists all ciphers accepted by the server for the scanned port. Ciphers with key sizes below 128 bits or known-weak algorithms should be disabled.

Protocol	Cipher Name	Bits	Strength / Status
TLSv1.3	TLS_AES_256_GCM_SHA384	256	Very Strong (256-bit)
TLSv1.3	TLS_CHACHA20_POLY1305_SHA256	256	Very Strong (256-bit)
TLSv1.2	ECDHE-ECDSA-AES128-GCM-SHA256	128	Strong
TLSv1.2	ECDHE-ECDSA-AES256-GCM-SHA384	256	Very Strong (256-bit)
TLSv1.2	ECDHE-ECDSA-AES128-SHA	128	Strong
TLSv1.2	ECDHE-ECDSA-AES256-SHA	256	Very Strong (256-bit)
TLSv1.2	ECDHE-RSA-CHACHA20-POLY1305	256	Very Strong (256-bit)
TLSv1.2	ECDHE-RSA-AES128-GCM-SHA256	128	Strong
TLSv1.2	ECDHE-RSA-AES256-GCM-SHA384	256	Very Strong (256-bit)
TLSv1.2	ECDHE-RSA-AES128-SHA	128	Strong
TLSv1.2	ECDHE-RSA-AES256-SHA	256	Very Strong (256-bit)
TLSv1.2	AES128-GCM-SHA256	128	Strong
TLSv1.2	AES256-GCM-SHA384	256	Very Strong (256-bit)
TLSv1.2	AES128-SHA	128	Strong
TLSv1.2	AES256-SHA	256	Very Strong (256-bit)

Protocol	Cipher Name	Bits	Strength / Status
TLSv1.2	DES-CBC3-SHA	112	Borderline – Avoid For New Deployments
TLSv1.1	ECDHE-ECDSA-AES256-SHA	256	Very Strong (256-bit)
TLSv1.1	ECDHE-RSA-AES128-SHA	128	Strong
TLSv1.1	ECDHE-RSA-AES256-SHA	256	Very Strong (256-bit)
TLSv1.1	AES128-SHA	128	Strong
TLSv1.1	AES256-SHA	256	Very Strong (256-bit)
TLSv1.1	DES-CBC3-SHA	112	Borderline – Avoid For New Deployments
TLSv1.0	ECDHE-ECDSA-AES256-SHA	256	Very Strong (256-bit)
TLSv1.0	ECDHE-RSA-AES128-SHA	128	Strong
TLSv1.0	ECDHE-RSA-AES256-SHA	256	Very Strong (256-bit)
TLSv1.0	AES128-SHA	128	Strong
TLSv1.0	AES256-SHA	256	Very Strong (256-bit)
TLSv1.0	DES-CBC3-SHA	112	Borderline – Avoid For New Deployments
