STRATEGIC OVERVIEW

[Note: Summary generated using local failsafe]

Network Assessment Briefing

1. Executive Summary

The network at 104.18.26.120 is currently **At Risk**. The total number of open ports identified is 3, with the following security posture verdict: None. There are no known threats detected, but the presence of standard HTTP/HTTPS services and the lack of security posture could lead to potential vulnerabilities and reduced security. It is recommended to prioritize hardening efforts to mitigate the identified risks.

2. Network Fingerprint (Table)

PORT / PROTOCOL	SERVICE NAME	FUNCTION	RISK ASSESSMENT
80/tcp (Open)	SSL	HTTP	HTTP/HTTPS proxy
443/tcp (Open)	HTTP	HTTP/HTTPS proxy	Medium - Unencrypted
8080/tcp (Open)	SSL	HTTP	HTTP/HTTPS proxy

3. Deep Dive Analysis

- **Port 8080/tcp (Open):** This port is open to HTTP/HTTPS traffic, which could be a security risk if it is not properly secured. It is possible that this port is used for applications other than the default HTTP/HTTPS service, which could indicate a misconfiguration or unauthorized service. It is recommended to investigate and secure this port.

4. Remediation & Hardening

1. **Disable UPnP if not needed:** UPnP (Universal Plug and Play) is a protocol that allows devices to automatically configure network settings. If UPnP is not required, it should be disabled to prevent unauthorized network access.
 2. **Ensure the router firmware is updated:** Regularly updating the firmware of the router can help fix known vulnerabilities and ensure compatibility with the latest security standards.
 3. **Implement firewall rules:** Implement strict firewall rules to restrict access to only necessary ports and protocols. This can help prevent unauthorized access and reduce the attack surface of the network.
-

Summary of Findings

- **Open Ports:** 3
- **Security Posture Verdict:** None
- **Threats Detected:** 0
- **Risk Level:** At Risk

Recommendations

- **Disable UPnP if not needed.**
 - **Ensure the router firmware is updated.**
 - **Implement firewall rules** to restrict access to only necessary ports and protocols.
-

This brief assessment highlights the current security posture of the target network and provides actionable advice to mitigate potential risks.
